October 2013 data

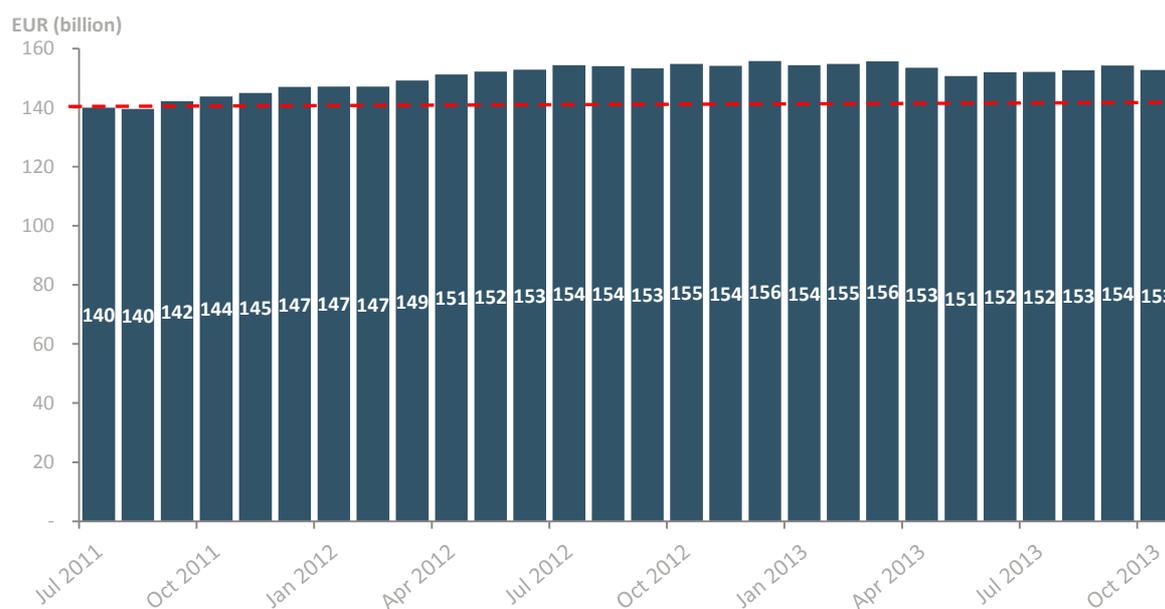

Deposit volumes remained broadly stable in October 2013 at €152.7 billion, with deposits decreasing by €1.5 billion month-on-month.

This was largely due to :

- The majority of the short-term deposit inflows referred to in last month’s note leaving the system during October as expected; for further detail – (http://banking.finance.gov.ie/wp-content/uploads/Deposit_Note_Sep_dataset-Oct-2013.pdf)
- In a reversal of last month’s trend, Sterling weakened against the Euro during October by -1.4%

Drawings from the ECB by Covered Banks continuing to decline during the month of October to stand at €31.1 billion (see our October ECB Funding Note for further detail - <http://banking.finance.gov.ie/presentations-and-latest-documents/>).

* excludes NTMA deposits held prior to recapitalisations, AIB’s former Polish operations and includes the Northern Rock deposit book acquired by ptsb in January 2012. The figures are also adjusted for reclassification referred to in previous notes.

As shown in Figure 2 below, deposits have increased by c.€12.7 billion (c.9%) since the recapitalisation were completed and down c.€2.0 billion year-on-year.

Month-on-month data

Headline deposits were down by €1.5 billion for the month of October, largely due to short-term deposits leaving the system as expected.

Balances in the UK were negatively impacted in October with Sterling weakening against the Euro; -1.4% vis-à-vis September exchange rates.

As anticipated, we continue to observe an insignificant impact on deposit volumes in the Covered Banks as a result of the ending of the ELG Scheme for new liabilities on the 28th March 2013.

Year-to-date data

Underlying deposits, other than UK balances, are up €2.2 billion year-to-date. However, this is offset by lower deposits in the UK of €3.2 billion.

The main driver of the decrease in headline deposits of c.-€3.0 billion year-to-date, has been the impact of reclassifications and FX movements which combined account for the majority of the decrease since the start of the year.

With Sterling weakening during the month of October against the Euro, this trend continues to impact on the year-to-date position with Sterling 4% weaker compared to the €/Sterling exchange rate at the end of 2012 ; thus deposit balances in the UK for the year-to-date continue to be negatively impacted as illustrated in Table A below.

Table A : Reconciliation of movements in deposit volumes for the year-to-date

	€bn	As a % of Total €bn Movement since Dec 12
Deposit Volumes as at 28 December 2012		156
<i>Less movements since Dec 12:</i>		
Reclassification outflows	-2	
Reclassification inflows	1	
FX Movements	-2	
	<u>-2</u>	66%
Movements in Deposit Volumes other than UK	2	
Movements in UK Deposit Volumes	-3	
Total Deposit Volume Movement	<u>-1</u>	33%
		<u>-3</u>
Deposit Volumes as at 25 October 2013		<u>153</u>

Note: All figures rounded to nearest €bn. Figures based on estimates by DoF using official volume data and FX rates.

Deposit volumes on a constant currency basis

As exchange rates are an important factor in understanding period to period comparisons in deposit volumes, we believe the presentation of results on a constant-currency basis in addition to reporting headline results will help improve the readers' ability to understand the trends in covered bank deposit volumes. Constant-currency information compares results between periods as if exchange rates had remained constant period-over-period. We calculate constant-currency by calculating the prior-period closing deposit volume using the current period-end foreign currency exchange rate.

As can be seen in the Table B below and consistent with the discussion above, on a constant currency basis deposit volumes remained broadly stable - down €1.0 billion in October.

Table B : Deposit volumes on a constant currency basis using current period-end rate

Deposit volumes on a constant currency basis

Period ended	Period end volume, at current period end rate	Movement between periods
	€'mn	€'mn
28 December 2012	154,058	
27 September 2013	153,746 -	312
25 October 2013	152,744 -	1,002
Cumulative movement, at constant currency	-	1,314

Note: These figures are rounded to the nearest €'mn

Please also note that the deposit volume information presented here is gathered on a geographic basis (where the business is conducted rather than the actual currency of the underlying deposit accounts). These figures should therefore be considered indicative only, but will give a good indication of the period to period movements adjusted for exchange rate movements.

Note on statistics

Central Bank statistics are very different from those shown in the data set presented above. Please note (as we covered in our first bulletin: http://banking.finance.gov.ie/wp-content/uploads/Deposit_Note-Republished-25-April-2012.pdf) that the statistics published by the Central Bank of Ireland are compiled using a different methodology than those produced by the Covered Banks themselves.
